

Job Description for Associate, Services Business Intelligence

Job Description

Ciena's Services Business Intelligence & Data Science team delivers reporting, analytics, and data-driven insights that enable informed decision-making across the Services organization. This role contributes to the evolution of business intelligence capabilities spanning the transactional lifecycle from sales opportunities through post-sales services. The position collaborates with business and IT stakeholders to develop reporting solutions that improve visibility into operational performance and key business metrics.

How you will make an impact:

- Understand, research, and document business requirements and contribute to solution development.
- Design and develop report architecture, including report user interfaces and data models, to optimize performance and integration.
- Deliver reporting for operational and business metrics that provide visibility into performance against key performance indicators.
- Participate in project planning activities to analyse requirements and design reporting and information systems solutions.
- Develop and maintain dashboards and reports.
- Interface with internal teams to resolve reporting and data-related issues.
- Participate in proof-of-concept initiatives for new tools and technologies.

The must haves:

- **Education:** Degree in Finance, Commerce, Engineering, or equivalent.
- **Experience:** 1+ years' experience.
- Application of Power BI and SQL.
- Good business acumen.

Nice to haves:

- Application of self-directed work prioritisation and goal setting.
- Ability to work collaboratively and independently.
- Interpersonal, communication, problem-solving, analytical, and stakeholder-facing experience.
- Experience coordinating team activities to achieve business objectives.
- Commitment to meeting delivery timelines.
- Attention to detail to maintain data completeness and accuracy.
- Experience working within a global organisation across multiple time zones.
